SUMMARY

Senior full stack engineer with 15+ years shipping production web applications. At EOS One, built the Vue 3 front end of a real time live meeting platform where up to 100 users share a synchronized screen over SignalR, plus a KPI Scorecard spanning seven reporting intervals, an interactive D3 org chart, and the 150 component design system the product still runs on. Back end experience across C#, .NET, Python, FastAPI, and Postgres, and builds modern React and TypeScript apps independently.

SKILLS

Front End: Vue 2 and 3, React, Next.js, TypeScript, JavaScript, D3, HTML5, CSS3, SCSS, Vite, npm monorepos, design systems, design tokens, accessibility, responsive layouts, animation (GSAP)

Real Time and Back End: SignalR, C#, .NET, REST APIs, Python, FastAPI, Node.js, Auth0, Stripe, Redis

Data: Postgres, pgvector, SQL Server, Azure SQL, Cosmos DB, MySQL, Oracle, SQLite

Cloud, CI/CD and Testing: Azure Pipelines, Azure App Service, GitHub Actions, Fly.io, Neon, Cloudflare Workers, Vitest, Playwright, TestRail, BrowserStack

AI: LLM integrations, RAG, Claude Code, MCP servers, agent workflows

Integrations: NetSuite, SuiteCommerce, Salesforce, Jitterbit, WordPress, Jira and Azure DevOps APIs

Leadership: Code review standards, design system governance, mentoring, people management

EXPERIENCE

Atlas UP | Staff Software Engineer | Remote | June 2025 to October 2026
Joined through Atlas UP's acquisition of EOS One from EOS Worldwide; retained as one of three staff engineers as the team went from 35 to 9.

- Built the interactive Accountability Chart builder, the most used AI tool on a platform of about 10,000 monthly active users: a Vue 3 and D3 org chart with animated drag and drop for moving seats and teams, manual entry forms, and a chat assistant that updated the chart live, animating new seats in and highlighting edited ones.
- Built the V/TO builder, a guided eight section strategic planning flow where users either filled in fields directly with LLM feedback or built each section step by step through conversation.
- Extended the Scorecard with LLM issue detection: after three off track intervals, the model checked whether a measurable was worsening or recovering to avoid duplicate issues, then compared it against related data and opened an issue with suggested fixes.
- Owned these features end to end, from Python LLM microservices through the Vue 3 UI, across a C#, .NET, SignalR, Redis, and Cosmos DB stack.
- Continued to own and extend the EOS One component library and front end platform post acquisition, shipping to production daily against weekly release trains.
- Built a system of 30+ Claude Code skills that took Jira tickets from reproduction to a verified pull request, clearing 100+ bugs and about 25 features in six weeks with a 95% first pass acceptance rate.
- Built an AI regression lane running TestRail cases through Playwright, cutting regression cycles from about a week to 8 to 12 hours, and contributed to the production MCP server for EOS One.

EOS Worldwide | Remote | February 2023 to June 2025
Staff Front End Engineer (Dec 2024 to June 2025), Senior Front End Developer (Feb 2023 to Dec 2024)

- Built the entire Vue 3 front end of EOS One's live meeting platform, the core of the product: up to 100 concurrent users seeing the same screen in real time, with every change synchronized over SignalR.
- Designed a configurable agenda system with five meeting types, including a custom type that let teams assemble their own meeting from reusable Vue 3 agenda components.
- Handled real world collaboration edge cases: a conflict resolution prompt when two users edited the same data, and retry and reconnect logic for dropped or degraded connections.
- Built the EOS One Scorecard in Vue 3 and contributed to its C# and .NET APIs, tracking measurables across seven intervals from daily to annual. Supported at least, at most, range, and yes or no goals; currency, percentage, and duration formats; automatic on track and off track coloring; and hit rates with averages or totals per measurable.
- Architected and built the EOS One Vue 3 component library from the ground up: about 150 components, front end services, and a design token styling system that set the patterns the product still runs on.
- Built voice activated note taking for live meetings, backed by a Python service that recorded sessions, generated notes, emailed summaries, and suggested to dos for each attendee.
- Led front end unit testing with Vitest and CI/CD quality gates, bringing front end services to about 85% coverage.
- Promoted to Staff and managed three direct reports; reviewed every front end pull request and mentored four to five junior developers toward senior roles.

Qualfon (formerly Dialog Direct and Budco) | Senior Developer | Highland Park, MI | April 2011 to February 2023
Previously NetSuite Team Lead, NetSuite Developer, WordPress Developer, and Email Marketing Coordinator

- Core developer on a multi tenant Vue and C# e-commerce platform with a shared core, building per customer customizations and migrating clients off NetSuite; led its front end migration from Vue 2 to Vue 3.
- Built and maintained about 15 NetSuite SuiteCommerce B2B instances serving 100,000+ users.
- Led the NetSuite team of five direct reports, owning delivery, technical direction, and client facing requirements.
- Built Jitterbit integrations connecting on premise Oracle and SQL Server with NetSuite, Salesforce, and internal APIs, and ran performance and load testing from IIS down to slow SQL.

Earlier: Developer and Systems Operations, Sotheby's International Realty (SKBK), Birmingham, MI, June 2006 to March 2011

INDEPENDENT PROJECTS

RoleHawk | Creator and Sole Engineer | October 2026

- Open source, local first job search app built with React 18, TypeScript, and TanStack Query on a Python FastAPI, SQLAlchemy, and SQLite back end, shipped as a one line installer for macOS, Windows, and Linux.

travisjterry.dev | Personal Site | October 2026

- Next.js 15, React 19, and TypeScript static site with GSAP and Lenis animations, reduced motion support, a 100 Lighthouse accessibility score, and a RAG assistant behind a secured Cloudflare Worker.

FoundrKids | Founder and Sole Engineer | February 2026 to Present

- Pre-launch learning platform for kids 8 to 15: three Vue apps, a FastAPI back end, Postgres with pgvector, Redis, and Stripe on Fly.io and Neon, with about 2,500 tests and a six layer child safety pipeline.

Pocket Chronicles | Founder and Sole Engineer | July 2026

- Native iOS family memory app, launched on the App Store and since retired. Built with SwiftUI, SwiftData offline sync, StoreKit 2, and a FastAPI and Postgres back end, with about 2,700 automated tests.

EDUCATION

Associate of Applied Science, Computer Science | ITT Technical Institute, Troy, MI
